## General Information

All STULZ controllers are equipped with an (optional) RS-485 interface, which is used for the described data protocol. The maximum number of controllers connected via the RS-485 bus is 31. The communication with a controller is based on the master/slave principle. Which means a controller will only send data via the bus line if the data has been requested by a master (BMS, Monitoring System).

The transmission parameters are fixed to the following settings:

- 9600 baud
- 8 data bits
- NO parity
- 1 stop bit

## Message Format

0	1..n-2	n-1	n-n
ID	CMD	LEN	DATA bytes

ID	controller id (1..255)
CMD	command id
LEN	number of following bytes including the checksum
DATA	data bytes depending on the command byte value (optional)
CS-LB	low byte checksum
CS-HB	high byte checksum

The 16 bit checksum is the 2s-complement of the sum of all bytes excluding the checksum bytes.  $\text{checksum} = \text{complement}(\text{sum}(\text{byte } 0 \dots \text{byte } n-2)) + 1$

### Examples:

Request 'Long Status' from controller number 1.

01	01	02	FF	FF
----	----	----	----	----

The answer from controller number 1 could be:

01	01	39	data	data	E7	A5
----	----	----	------	------	----	----

Request 'Short Status' from controller number 5.

05	07	03	02	FF	FF
----	----	----	----	----	----

The answer from controller number 5 could be:

05	07	03	0F	FF	FF
----	----	----	----	----	----

(-> unit is in operation , no alarm condition)

1 long status

Long Status Request

## Long Status Request (PC -&gt; MC)

Byte #	Description	Range	Value	C1001/2	C4000	C5000
0	controller id	1..255		x	x	x
1	command id		1	x	x	x
2	number of following bytes		2	x	x	x
3	LB checksum	0..255		x	x	x
4	HB checksum	0..255		x	x	x

The 16 bit checksum is the 2's complement of the sum from byte 0 to byte 2.

Set Parameter

## Set Parameter (PC -&gt; MC)

Byte #	Description	Range	Value	C1001/2	C4000	C5000
0	controller id	1..255		X	X	X
1	command id		2	X	X	X
2	number of following bytes		92	X	X	X
3	not used					
4	not used					
5	not used					
6	not used					
7	not used					
8	not used					
9	not used					
10	setpoint temperature	10..30 °C	0..200	X	X	X
11	setpoint humidity	10..90 %	10..90	X	X	X
12	return air temperature too high	0..30 °C	0..30	X	X	X
13	supply air temperature too high	0..30 °C	0..30	X	X	X
14	return air temperature too low	0..30 °C	0..30	X	X	X
15	supply air temperature too low	0..30 °C	0..30	X	X	X
16	water temperature too high	0..50 °C	0..50	X	X	X
17	water temperature too low	-50..0..30 °C	0..80	X	X	X
18	return humidity too high	0..90	0..90	X	X	X
19	supply humidity too high	0..90	0..90	X	X	X
20	return humidity too low	0..90	0..90	X	X	X
21	supply humidity too low	0..90	0..90	X	X	X
data module 1						
22	compressor start (setpoint + val)	0.0..10.0K	0..100	X	X	X
23	compressor hysteresis	0.0..10.0K	0..100	X	X	X
24	suction valve start	0.0..10.0K	0..100	X	X	X
25	suction valve proportional band	0.0..10.0K	0..100	X	X	X
26	drycooler start temperature	0.0..10.0K	0..100	X	X	X
27	drycooler enable temperature	0..35°C	0..35	X	X	X
28	glycol-pump start temperature	0.0..10.0K	0..100	X	X	X
29	GE/CW valve off temperature	0..45°C	0..45	X	X	X
30	GE/CW valve start temperature	0.0..10.0K	0..100	X	X	X
31	GE/CW valve proportional band	0.0..10.0K	0..100	X	X	X
32	reheat 1 start temperature	0.0..10.0K	0..100	X	X	X
33	reheat 1 hysteresis	0.0..10.0K	0..100	X	X	X
34	reheat 2 start temperature	0.0..10.0K	0..100	X	X	X
35	reheat 2 hysteresis	0.0..10.0K	0..100	X	X	X
36	reheat 3 start temperature	0.0..10.0K	0..100	X	X	X
37	reheat 3 hysteresis	0.0..10.0K	0..100	X	X	X
38	PWW valve start temperature	0.0..10.0K	0..100	X	X	X
39	PWW valve proportional band	0.0..10.0K	0..100	X	X	X
40	dehumidification start	0..90%	0..90	X	X	X
41	dehumidification hysteresis	0..90%	0..90	X	X	X
42	humidification start	0..90%	0..90	X	X	X
43	humidification hysteresis	0..90%	0..90	X	X	X
44	humidification proportional start	0..90%	0..90	X	X	X
45	humidification proportional band	0..90%	0..90	X	X	X
data module 2						
46	compressor start (setpoint + val)	0.0..10.0K	0..100	X	X	X
47	compressor hysteresis	0.0..10.0K	0..100	X	X	X
48	suction valve start	0.0..10.0K	0..100	X	X	X

2 set vals

## Set Parameter Acknowledge (MC -&gt; PC)

Byte #	Description	Range	Value	C1001/2	C4000	C5000
0	controller id	, 1.255		x	x	x
1	command id		2	x	x	x
2	number of following bytes		2	x	x	x
3	LB checksum	, 1.255		x	x	x
4	HB checksum	, 1.255		x	x	x

The 16 bit checksum is the 2's complement of the sum from byte 0 to byte 2.

3 set time

Set Time

## Set Time (PC -&gt; MC)

Byte #	Description	Range	Value	C1001/2	C4000	C5000
0	controller id	1..255		x	x	
1	command id		3	x	x	
2	number of following bytes		7	x	x	
3	year	0..99		x	x	
4	month	1..12		x	x	
5	day	1..31		x	x	
6	hour	0..23		x	x	
7	minute	0..59		x	x	
8	LB checksum	0..255		x	x	
9	HB checksum	0..255		x	x	

The 16 bit checksum is the 2's complement of the sum from byte 0 to byte 7.

## Set Time Acknowledge (MC -&gt; PC)

Byte #	Description	Range	Value	C1001/2	C4000	C5000
0	controller id	1..255		x	x	
1	command id		3	x	x	
2	number of following bytes		2	x	x	
3	LB checksum	0..255		x	x	
4	HB checksum	0..255		x	x	

The 16 bit checksum is the 2's complement of the sum from byte 0 to byte 2.

4 EEP read

Read Controller EEPROM Data

## Read EEPROM Data (PC -&gt; MC)

Byte #	Description	Range	Value	C1001/2	C4000	C5000
0	controller id	1..255		X	X	X
1	command id		4	X	X	X
2	number of following bytes		3	X	X	X
3	EEPROM address to be read	0..255	0.255	X	X	X
4	LB checksum	0..255		X	X	X
5	HB checksum	0..255		X	X	X

The 16 bit checksum is the 2's complement of the sum from byte 0 to byte 3.

## Read EEPROM Data (MC -&gt; PC)

Byte #	Description	Range	Value	C1001/2	C4000	C5000
0	controller id	1..255		X	X	X
1	command id		4	X	X	X
2	number of following bytes		3	X	X	X
3	contents of EEPROM (value)	0..255	0.255	X	X	X
4	LB checksum	0..255		X	X	X
5	HB checksum	0..255		X	X	X

The 16 bit checksum is the 2's complement of the sum from byte 0 to byte 3.

## EEPROM Address List:

Address	Description	Range	Value	C1001/2	C4000	C5000
56-57	LB/HB runtime fan 1	0..65536	0.65536	O.T.E.	?	
58-59	LB/HB runtime compressor 1	0..65536	0.65536	O.T.E.	?	
60-61	LB/HB runtime humidifier 1	0..65536	0.65536	O.T.E.	?	
62-63	LB/HB runtime reheat 1 / pump 1	0..65536	0.65536	O.T.E.	?	
64-65	LB/HB runtime reheat 2 / pump 2	0..65536	0.65536	O.T.E.	?	
66-67	LB/HB runtime fan 2	0..65536	0.65536	O.T.E.	?	
68-69	LB/HB runtime compressor 2	0..65536	0.65536	O.T.E.	?	
76-77	LB/HB runtime fan 3	0..65536	0.65536	O.T.E.	?	
78-79	LB/HB runtime compressor 3	0..65536	0.65536	O.T.E.	?	
86-87	LB/HB runtime fan 4	0..65536	0.65536	O.T.E.	?	
88-89	LB/HB runtime compressor 4	0..65536	0.65536	O.T.E.	?	
115	setpoint temperature	10.0..35.0°C	0.260	X	X	X
116	setpoint humidity	0..100%	0.100	X	X	X
122	return air temp. too high alarm	0..50°C	0.50	X	X	X
124	return air temp. too low alarm	0..50°C	0.50	X	X	X
128	return air humid. too high alarm	0..90%	0.90	X	X	X
130	return air humid. too low alarm	0..90%	0.90	X	X	X

00 01 10 00 10010

P.02

5 EEPROM write

**Write Controller EEPROM Data****Write EEPROM Data (PC -> MC)**

Byte #	Description	Range	Value	C1001/2	C4000	C5000
0	controller id	1..255		x	x	x
1	command id		5	x	x	x
2	number of following bytes		4	x	x	x
3	EEPROM address	0..255	0..255	x	x	x
4	EEPROM data	0..255	0..255	x	x	x
5	LB checksum	0..255		x	x	x
6	HB checksum	0..255		x	x	x

The 16 bit checksum is the 2's complement of the sum from byte 0 to byte 4.

**Write EEPROM Data (MC -> PC)**

Byte #	Description	Range	Value	C1001/2	C4000	C5000
0	controller id	1..255		x	x	x
1	command id		5	x	x	x
2	number of following bytes		2	x	x	x
3	LB checksum	0..255		x	x	x
4	HB checksum	0..255		x	x	x

The 16 bit checksum is the 2's complement of the sum from byte 0 to byte 2.

**EEPROM Address List: see list for command 4 (READ EEPROM)**

6 RAM write

Write RAM Data for Temporary Changes

Write RAM Data for temporary changes (PC -&gt; MC)

Byte #	Description	Range	Value	C1001/2	C4000	C5000
0	controller id		1..255		x	x
1	command id		6	x	x	x
2	number of following bytes		4	x	x	x
3	RAM address	0..255	0..255	x	x	x
4	RAM data	0..255	0..255	x	x	x
5	LB checksum		0..255		x	x
6	HB checksum		0..255		x	x

The 16 bit checksum is the 2's complement of the sum from byte 0 to byte 4.

Write RAM Data for temporary changes (MC -&gt; PC)

Byte #	Description	Range	Value	C1001/2	C4000	C5000
0	controller id		1..255		x	x
1	command id		6	x	x	x
2	number of following bytes		2	x	x	x
3	LB checksum	0..255		x	x	x
4	HB checksum	0..255		x	x	x

The 16 bit checksum is the 2's complement of the sum from byte 0 to byte 2.

RAM / EEPROM Address List: see list for command 4 (READ EEPROM)

7 ON-OFF

Set Unit ON / OFF - Request Short Status

## Set Unit ON / OFF / REQUEST STATUS (PC -&gt; MC)

Byte #	Description	Range	Value	C1001/2	C4000	C5000
0	controller id	1..255		X	X	X
1	command id		7	X	X	X
2	number of following bytes		3	X	X	X
3	STATUS-REQUEST / ON / OFF byte	bit-coded		X	X	X
4	LB checksum	0..255		X	X	X
5	HB checksum	0..255		X	X	X

The 16 bit checksum is the 2's complement of the sum from byte 0 to byte 3.

## Set Unit ON / OFF / REQUEST STATUS (MC -&gt; PC)

Byte #	Description	Range	Value	C1001/2	C4000	C5000
0	controller id	1..255		X	X	X
1	command id		7	X	X	X
2	number of following bytes		3	X	X	X
3	S_STAT short unit status	bit-coded		X	X	X
4	LB checksum	0..255		X	X	X
5	HB checksum	0..255		X	X	X

The 16 bit checksum is the 2's complement of the sum from byte 0 to byte 3.

Bit #	STATUS-REQUEST / ON / OFF byte	POS	Value	C1001/2	C4000	C5000
0	0 = unit off, 1 = unit on	0x01	bit	X	X	X
1	1 = request short status only	0x02	bit	X	X	X
2	not used	0x04	bit	X	X	X
3	not used	0x08	bit	X	X	X
4	not used	0x10	bit	X	X	X
5	not used	0x20	bit	X	X	X
6	not used	0x40	bit	X	X	X
7	not used	0x80	bit	X	X	X

NOTE: if bit #1 is set to 1, the value of bit #0 is don't care !!

Bit #	S_STAT short unit status	POS	R/W	C1001/2	C4000	C5000
0	0 = PC-STOP (monitoring), 1 = on	0x01	R/W	X	X	X
1	0 = REMOTE STOP (contact), 1 = on	0x02	R	X	X	X
2	0 = LOCAL STOP (key), 1 = on	0x04	R	X	X	X
3	0 = TIMER-STOP (weekly oper.), 1 = on	0x08	R			X
4	1 = WARNING (FILTER...)	0x10	R	X	X	X
5	1 = HUMIDITY ALARM (low / high)	0x20	R	X	X	X
6	1 = TEMPERATURE ALARM (low / high)	0x40	R	X	X	X
7	1 = COMMON ALARM	0x80	R	X	X	X

NOTE: only if bits #0 to #3 are set to 1 the unit is in operation.

If one of the bits #0,#1,#2,#3 is set to 0 the unit is in STOP condition.

8 AL-reset

Unit Alarm Reset

## Unit Alarm Reset (PC -&gt; MC)

Byte #	Description	Range	Value	C1001/2	C4000	C5000
0	controller id	1..255		x	x	x
1	command id		8	x	x	x
2	number of following bytes		2	x	x	x
3	LB checksum	0..255		x	x	x
4	HB checksum	0..255		x	x	x

The 16 bit checksum is the 2's complement of the sum from byte 0 to byte 2.

## Unit Alarm Reset (MC -&gt; PC)

Byte #	Description	Range	Value	C1001/2	C4000	C5000
0	controller id	1..255		x	x	x
1	command id		8	x	x	x
2	number of following bytes		2	x	x	x
3	LB checksum	0..255		x	x	x
4	HB checksum	0..255		x	x	x

The 16 bit checksum is the 2's complement of the sum from byte 0 to byte 2.

9 status 2

Controller Status 2, Component Runtime

## Controller Status 2, Component Runtime (PC -&gt; MC)

Byte #	Description	Range	Value	C1001/2	C4000	C5000
0	controller id	1..255			x	x
1	command id		9		x	x
2	number of following bytes		2		x	x
3	LB checksum	0..255			x	x
4	HB checksum	0..255			x	x

The 16 bit checksum is the 2's complement of the sum from byte 0 to byte 2.

## Controller Status 2, Component Runtime (MC -&gt; PC)

Byte #	Description	Range	Value	C1001/2	C4000	C5000
0	controller id	1..255			x	x
1	command id		9		x	x
2	number of following bytes		43		x	x
3	number of modules	0..8	0..8		x	x
				data module 1		
4	LB runtime fan 1	0..65536			x	x
5	HB runtime fan 1					
6	LB runtime compressor 1	0..65536			x	x
7	HB runtime compressor 1					
8	LB runtime humidifier 1	0..65536			x	x
9	HB runtime humidifier 1					
10	LB runtime pump 1 (reheat 1)	0..65536			x	x
11	HB runtime pump 1 (reheat 1)					
12	LB runtime pump 2 (reheat 2)	0..65536			x	x
13	HB runtime pump 2 (reheat 2)					
				data module 2		
14	LB runtime fan 1	0..65536			x	x
15	HB runtime fan 1					
16	LB runtime compressor 1	0..65536			x	x
17	HB runtime compressor 1					
18	LB runtime humidifier 1	0..65536			x	x
19	HB runtime humidifier 1					
20	LB runtime pump 1 (reheat 1)	0..65536			x	x
21	HB runtime pump 1 (reheat 1)					
22	LB runtime pump 2 (reheat 2)	0..65536			x	x
23	HB runtime pump 2 (reheat 2)					
				data module 3		
24	LB runtime fan 1	0..65536			x	x
25	HB runtime fan 1					
26	LB runtime compressor 1	0..65536			x	x
27	HB runtime compressor 1					
28	LB runtime humidifier 1	0..65536			x	x
29	HB runtime humidifier 1					
30	LB runtime pump 1 (reheat 1)	0..65536			x	x
31	HB runtime pump 1 (reheat 1)					
32	LB runtime pump 2 (reheat 2)	0..65536			x	x
33	HB runtime pump 2 (reheat 2)					

9 status 2

data module 4			
34	LB runtime fan 1	0.65536	X X
35	HB runtime fan 1		
36	LB runtime compressor 1	0.65536	X X
37	HB runtime compressor 1		
38	LB runtime humidifier 1	0.65536	X X
39	HB runtime humidifier 1		
40	LB runtime pump 1 (reheat 1)	0.65536	X X
41	HB runtime pump 1 (reheat 1)		
42	LB runtime pump 2 (reheat 2)	0.65536	X X
43	HB runtime pump 2 (reheat 2)		
44	LB checksum	0.265	X X
45	HB checksum	0.255	X X

The 16 bit checksum is the 2's complement of the sum from byte 0 to byte 43.

10 ident

## Controller Identification

### Controller Identification (PC -> MC)

Byte #	Description	Range	Value	C1001/2	C4000	C5000
0	controller id	1..255		X	X	X
1	command id		10	X	X	X
2	number of following bytes		2	X	X	X
3	LB checksum	0..255		X	X	X
4	HB checksum	0..255		X	X	X

The 16 bit checksum is the 2's complement of the sum from byte 0 to byte 2.

### Controller Identification (MC -> PC)

Byte #	Description	Range	Value	C1001/2	C4000	C5000
0	controller id	1..255		X	X	X
1	command id		10	X	X	X
2	number of following bytes		6	X	X	X
3	software version	0..255	0..255	X	X	X
4	hardware version	0..255	see table	X	X	X
5	reserved			X	X	X
6	unit type	0..255	see table	X	X	X
7	LB checksum	0..255		X	X	X
8	HB checksum	0..255		X	X	X

The 16 bit checksum is the 2's complement of the sum from byte 0 to byte 6.

#### Value      Hardware Version

0	unknown type
1	STULZ C4000
2	STULZ C1001
3	STULZ C1002
4	STULZ C5000
5	not used
6	...

#### Value      Unit Type

0	MC-only
1	DX (Compressor Unit)
2	CW (Chilled Water Unit)
3	CH (Chiller)
4	not used
5	...

11 config

## Unit Configuration

### Unit Configuration (PC -> MC)

Byte #	Description	Range	Value	C1001/2	C4000	C5000
0	controller id	1..255		x	x	x
1	command id		11	x	x	x
2	number of following bytes		2	x	x	x
3	LB checksum	0..255		x	x	x
4	HB checksum	0..255		x	x	x

The 16 bit checksum is the 2's complement of the sum from byte 0 to byte 2.

### Unit Configuration (MC -> PC)

Byte #	Description	Range	Value	C1001/2	C4000	C5000
0	controller id	1..255		x	x	x
1	command id		11	x	x	x
2	number of following bytes		13	x	x	x
3	number of modules	0..8	0..8	x	x	x
4	LB configuration module 1	bit-coded	see table	x	x	x
5	HB configuration module 1	bit-coded	see table	x	x	x
6	LB configuration module 2	bit-coded	see table	x	x	x
7	HB configuration module 2	bit-coded	see table	x	x	x
8	LB configuration module 3	bit-coded	see table	x	x	x
9	HB configuration module 3	bit-coded	see table	x	x	x
10	LB configuration module 4	bit-coded	see table	x	x	x
11	HB configuration module 4	bit-coded	see table	x	x	x
12	general configuration byte 1	bit-coded	see table	x	x	x
13	general configuration byte 2 (not used)	bit-coded	see table	x	x	x
14	LB checksum	0..255		x	x	x
15	HB checksum	0..255		x	x	x

The 16 bit checksum is the 2's complement of the sum from byte 0 to byte 13.

Bit #	LB configuration module x	POS	Value	C1001/2	C4000	C5000
0	reheat 1	0x01	bit	x	x	x
1	reheat 2	0x02	bit	x	x	x
2	reheat 3 / hotgas reheat	0x04	bit		x	x
3	glycol pump	0x08	bit		x	x
4	drycooler	0x10	bit		x	x
5	compressor (1st stage)	0x20	bit	x	x	x
6	dehumidification	0x40	bit	x	x	x
7	humidification	0x80	bit	x	x	x

NOTE: bit set means component configured.

Bit #	HB configuration module x	POS	Value	C1001/2	C4000	C5000
0	GE/CW valve	0x01	bit	x	x	x
